

TR-G2T

GPS L1/L2/L2C/L5
Galileo E1/E5A

TR-G2T OEM board is based on our TRIUMPH Technology implemented in our TRIUMPH Chip. For the first time in the GNSS history we offer up to 100 Hz RTK. The TR-G2T board tracks GPS /L2/L2C/L5 and Galileo E1/E5.

The on-board power supply on TR-G2T OEM board accepts any voltage from +4.5 to +40 volts and delivers clean filtered voltage where needed. This eliminates the risk of power contamination (ripples) that can be created when clean power is generated elsewhere and delivered to the board via cables. TR-G2T board also includes drivers for four LEDs, ON/OFF and function button controllers. In addition, the board comes with large amount of flash for data storage. The CAN interface in TR-G2T board is provided complete with all associated hardware and firmware, not just the CAN bus. The same is true with all the serial RS232/RS422 ports in our board. Simply stated, additional functions are not needed to incorporate any of our TR-G2T OEM board in most applications.

In addition to timing strobe and event marker, the TR-G2T OEM board includes the option of complete IRIG timing system.

*1. Active Low input from the FN button of the MinPad. Internal pull-up 10 kOhm to +3V. Must be left open if not used.
 *2. Active Low input which is equivalent to ON/OFF button of the MinPad. Internal pull-up 10 kOhm to +3V. After abnormal turn off because of external power failure, the boards turn on automatically when external power is restored
 *3. Connect to ground to activate. Internal pull-up 2.2 kOhm to +3V.
 *4. LED1_GRN and LED1_RED are used to control the STAT LED of the MinPad. LED2_GRN and LED2_RED are equivalent to the REC LED of the MinPad. The output is a +3V driver in series

with 100 Ohm resistor for each LED. LEDs should be with common cathode.
 *5. AM sine-wave signal; 2.1Vp-p (Mark), 0.7Vp-p (Space).
 *6. Voh > 2.0V (typ) at 50 Ohm load.
 *7. Internal pull-up 5 kOhm to +3V
 Digital connector: Micro Header, 2x20 pos, 0.050" pitch. Samtec p/n FTSH-120-01-L-DV-K-A.
