GPS L1/L2/L2C/L5  
Galileo E1/E5A, GLONASS L1/L2

TRE-G3TAJT OEM board is based on our TRIUMPH Technology implemented in our TRIUMPH Chip. For the first time in the GNSS history we offer up to 100 Hz RTK. The TRE-G3TAJT board includes the true Galileo option.

The main advantage of this board is the In Band Interference Rejection (IBIR) availability.

The on-board power supply on TRE-G3TAJT OEM board accepts any voltage from +4.5 to +40 volts and delivers clean filtered voltage where needed. This eliminates the risk of power contamination (ripples) that can be created when clean power is generated elsewhere and delivered to the board via cables.

TRE-G3TAJT board also includes drivers for four LEDs, ON/OFF and function button controllers. In addition, the board comes with large amount of flash for data storage.

The CAN interface in TRE-G3TAJT board is provided complete with all associated hardware and firmware, not just the CAN bus. The same is true with all the serial RS232/RS422 ports in our board. Simply stated, additional functions are not needed to incorporate any of our TRE-G3TAJT OEM board in most applications.

In addition to timing strobes and event markers, the TRE-G3TAJT OEM board includes the option of complete IRIG timing system.

\*1. Active Low input from the FN button of the MinPad. Must be left open if not used.

\*2. LED1\_GRN and LED1\_RED are used to control the STAT LED of the MinPad. LED2\_GRN and LED2\_RED are equivalent to the REC LED of the MinPad. The output is a +3.3V driver in series with 100 Ohm resistor for each LED. LEDs should be with common cathode.

\*3. Voh>1.8V at 50 Ohm load.

\*4. Internal pull-up 5 kOhm to +3.3V

\*5. Connect to ground to activate. Internal pull-up 2 kOhm to +3.3V.

\*6. AM sine-wave signal; 2.1Vp-p (Mark), 0.7Vp-p (Space).

\*7. Active Low input which is equivalent to ON/OFF button of the MinPad. After abnormal turn off because of external power failure, the boards turn on automatically when external power is restored.
